<p>Cocco, Antonio. COMPOSITION LIMITS AT HIGH TEMPERATURES OF THE PHASE, WITH CUBIC STRUCTURE, CON- SISTING OF ZrO_2 AND CaO. [1961] [10p. 7 refs. Order from SLA mi\$1.80, ph\$1.80 61-10898 Trans. of la Chimica e l'Industria (Italy) 1959, v. 41, no. 9, p. 882-886. At a temperature of 1600°C. in an oxidizing milieu, the phase with cubic structure is limited to a range lying between about 3 and 10% CaO, and correspond- ingly 95 to 90% ZrO_2. With higher percentages of CaO, $CaO\cdot ZrO_2$ appears in equilibrium with this cu- bic phase. For lower percentages, on the other hand, the ZrO_2 appears with a tetragonal structure, which probably holds a very small percentage of calcium oxide in solid solution. At lower temperatures the domain of the cubic solid solution is restricted, as the curve bounding its extension toward ZrO_2 tends to shift toward the curve bounding its extension toward $CaO\cdot ZrO_2$. (Author)</p>	<p>61-10898 I. Calcium oxide-zirconium dioxide systems--Phase studies I. Cocco, A.</p> <p>Office of Technical Services (Chemistry--Physical, TT, v. 5, no. 12)</p>
